

Skill Moderation System - Requirement Document

1. The Outcome

Design and implement web application to display skills from table in MySQL DB. User can edit name of skills and update state of skill (*reject*, *accept*).

2. [Screenshot of outcome](#)

3. Expected step to be taken to implement

- User can search skills using free text search box
- Sorting of skill based on skill creation date
- User can moderate a skill by *moderation_state* (Approve, Reject)
- Recommended: hosting site on free hosting service and share URL with QuezX team

5. Code Sharing and hosting site

- It is recommended that you share you code using public source control systems like github.com or similar
- It is also recommended that you host code on free online hosting platforms

6. Deliverables

- MySQL schema for tables **skills** and **moderation_states**
- Code base on github.com or similar or zipped and mailed
- URL of site where it is hosted

7. Duration

- 1 week from the start of the project (Submission Date - 31-May-2015)

8. Submission

- Submission needs to be done on email. The deliverables needs to be emailed to devs@quetzal.in
